PERSONAL PROJECTS

Tourist Car Rental (06/2020 - 07/2020)
- This project was done using Pega. In this we can take a Car as rent. All the data enter by the customer can save in Pega system of records.

Twitter Analysis using Flume (10/2019 - 10/2019)
- This project was done using Apache flume. In this we can see that the massive amount of data is streaming in twitter. It will update when new data added to twitter. We can get the large amount of data using this flume. So we can analyze the twitter messages.

Student Management System using JAVA (03/2018 - 03/2018)
- This project was done using Java. In this I have created access for three types of participants students, teachers and admin. Student can see their profile like Id, name, grade, time table, marks, fee updates etc,. Teachers can have access to give the marks to students, salary, they can set the time table. Admin can add and remove students/teachers.

Library Management System using C++ (04/2017 - 05/2017)
- This project was done using c++. In this I have created access for two types of participants students and admin. Admin can have access to add books and remove books. Students can have an access to take and return books. With this project we can search the available books.

SKILLS

C   C++   Java   Sql   Hadoop   flume
